

PROPELLO — Grant Intelligence Platform

Master Build Document for Claude Code Session

"Your next grant is already out there. We'll find it."

What Is Propello?

Propello is not a newsletter. It is a **Private Fundraising Intelligence Network** — a Development Director-as-a-Service platform for nonprofit organizations across New York City and nationally. Subscribers are not paying for content. They are paying for a continuously operating intelligence system that works on their behalf 24/7, surfaces funding opportunities they would never find manually, scores those opportunities against their specific mission profile, and packages everything in a format their board can act on immediately.

Brand Identity

- **Name:** Propello
 - **Tagline:** *"Your next grant is already out there. We'll find it."*
 - **Brand Voice:** Warm but sharp. The encouraging expert. Genuinely rooting for your mission.
 - **Visual Direction:** Dark, precise, architectural aesthetic with warm motion-forward copy
 - **Color Palette:** Dark navy/charcoal base · Teal accents · Electric blue highlights · Gold urgency markers
 - **Launch Market:** New York City (national presence from day one)
 - **Positioning:** Development Director-as-a-Service at 1.3% of the cost
-

System Architecture Overview

Propello is built on **four interconnected AI agents** operating inside Antigravity, each feeding into the next in a fully automated data pipeline. Outputs are delivered on a defined weekly, monthly, and quarterly cadence across three subscriber-facing channels.

ONBOARDING FORM

↓
AGENT 1: Intake & Profiling → subscriber_profiles (Supabase)
↓
AGENT 2: Mission-Match Engine → grant_matches (daily)
↓
AGENT 3: Strategic Fit Score Agent → scored matches + rationale
↓
AGENT 4: 990 Funder Audit Agent → hidden_liquidity alerts (weekly)
↓
OUTPUT LAYER:
→ Weekly Newsletter (Beehiiv)
→ Paid Member Dashboard (React/Next.js on Vercel)
→ Quarterly Board-Ready Brief PDF (Supabase Storage)

Database Schema (Supabase)

Tables to Initialize

```
-- 1. subscriber_profiles
CREATE TABLE subscriber_profiles (
  id UUID PRIMARY KEY DEFAULT gen_random_uuid(),
  created_at TIMESTAMP DEFAULT now(),
  org_name TEXT NOT NULL,
  mission_statement TEXT,
  ntee_code TEXT,
  primary_geo TEXT,
  program_types TEXT[],
  annual_budget TEXT, -- tier: <$100K | $100K-$500K | $500K-$1M | $1M-$5M | $5M+
  budget_tier_minimum INTEGER,
  staff_count INTEGER,
  profile_id TEXT UNIQUE,
  tier TEXT DEFAULT 'free' -- free | core | growth | board_brief
);

-- 2. grants_raw
CREATE TABLE grants_raw (
  id UUID PRIMARY KEY DEFAULT gen_random_uuid(),
  created_at TIMESTAMP DEFAULT now(),
  foundation_name TEXT,
  grant_title TEXT,
  description TEXT,
  award_min INTEGER,
```

```

    award_max INTEGER,
    deadline DATE,
    geo TEXT,
    program_types TEXT[],
    source_url TEXT,
    source TEXT, -- candid | foundation_site | az_nonprofit | google_news
    raw_data JSONB
);

-- 3. grant_matches
CREATE TABLE grant_matches (
    id UUID PRIMARY KEY DEFAULT gen_random_uuid(),
    created_at TIMESTAMP DEFAULT now(),
    subscriber_id UUID REFERENCES subscriber_profiles(id),
    grant_id UUID REFERENCES grants_raw(id),
    raw_similarity_score FLOAT,
    final_score INTEGER, -- 0-100
    score_breakdown JSONB,
    rationale TEXT,
    high_priority BOOLEAN DEFAULT false, -- true if score >= 85
    scored_at TIMESTAMP
);

-- 4. funder_profiles
CREATE TABLE funder_profiles (
    id UUID PRIMARY KEY DEFAULT gen_random_uuid(),
    ein TEXT UNIQUE,
    foundation_name TEXT,
    total_assets BIGINT,
    total_distributions BIGINT,
    fiscal_year_end DATE,
    required_distribution BIGINT,
    underspend_gap BIGINT,
    primary_program_areas TEXT[],
    geographic_focus TEXT,
    average_grant_size INTEGER,
    board_members JSONB,
    last_990_year INTEGER,
    updated_at TIMESTAMP DEFAULT now()
);

-- 5. liquidity_alerts
CREATE TABLE liquidity_alerts (
    id UUID PRIMARY KEY DEFAULT gen_random_uuid(),
    created_at TIMESTAMP DEFAULT now(),
    funder_id UUID REFERENCES funder_profiles(id),
    funder_name TEXT,

```

```

    gap_amount BIGINT,
    fiscal_year_end DATE,
    days_remaining INTEGER,
    hidden_liquidity BOOLEAN DEFAULT false,
    recommended_action TEXT,
    published BOOLEAN DEFAULT false
);

-- 6. drafting_kits
CREATE TABLE drafting_kits (
    id UUID PRIMARY KEY DEFAULT gen_random_uuid(),
    created_at TIMESTAMP DEFAULT now(),
    subscriber_id UUID REFERENCES subscriber_profiles(id),
    grant_id UUID REFERENCES grants_raw(id),
    strategic_narrative TEXT,
    key_data_points TEXT[],
    budget_framing TEXT,
    loi_opening_paragraph TEXT,
    generated_at TIMESTAMP
);

-- 7. board_briefs
CREATE TABLE board_briefs (
    id UUID PRIMARY KEY DEFAULT gen_random_uuid(),
    created_at TIMESTAMP DEFAULT now(),
    subscriber_id UUID REFERENCES subscriber_profiles(id),
    quarter TEXT, -- Q1 2026
    pdf_url TEXT,
    sector_intelligence TEXT,
    top_grants JSONB,
    funder_landscape_shifts TEXT,
    strategic_recommendations JSONB,
    generated_at TIMESTAMP
);

```

The Four Agents

Agent 1 — Intake & Profiling Agent

Trigger: Once, on new subscriber onboarding form submission **Function:** Reads org profile
 → classifies by NTEE code, geography, budget tier → writes `subscriber_profiles` record

Antigravity Prompt:

"Create a Python intake agent that accepts a JSON form submission containing: org_name, mission_statement, ntee_code, annual_budget, primary_geo, program_types (array), and staff_count. Validate and normalize all fields. Classify the org into one of 5 budget tiers (<\$100K, \$100K-\$500K, \$500K-\$1M, \$1M-\$5M, \$5M+). Write the structured record to the Supabase table 'subscriber_profiles'. Return a confirmation payload with the assigned profile_id and tier classification."

Agent 2 — Mission-Match Engine

Trigger: Daily cron at 6AM **Function:** Pulls new grant records → semantic similarity match vs. all subscriber profiles → writes qualifying matches to grant_matches

Tech: sentence-transformers (all-MiniLM-L6-v2) · cosine similarity · 60% threshold

Antigravity Prompt:

"Build a Python grant-matching agent. Step 1: Pull all new grant records from the grants_raw table added in the last 24 hours. Step 2: For each grant, load all subscriber profiles from Supabase. Step 3: Calculate semantic similarity between grant.description and profile.mission_statement using sentence-transformers (all-MiniLM-L6-v2). Step 4: Apply hard filters — reject if grant.geo != profile.primary_geo and grant.geo != 'national'. Reject if grant.max_award < profile.budget_tier_minimum * 0.05. Step 5: Write all matches scoring above 0.60 cosine similarity to the grant_matches table with subscriber_id, grant_id, and raw_similarity_score. Run on a daily cron schedule at 6AM."

Agent 3 — Strategic Fit Score Agent

Trigger: Runs after Agent 2 completes **Function:** Scores every new grant_match across 8 weighted dimensions → produces 0–100 Fit Score → writes rationale → flags 85+ as high priority

Scoring Model:

Dimension	Weight	Logic
Mission Alignment	25%	Semantic similarity score from Agent 2
Budget Fit	20%	Grant award range vs. org budget tier

Geographic Match	15%	Exact state = 100pts · Regional = 70pts · National = 50pts
Deadline Urgency	10%	Closing within 30 days scores higher
Funder Grant History	10%	990 analysis — has this funder given to similar orgs?
Program Type Match	10%	Matches grant program areas against org's program_types
Competitive Density	5%	Estimated eligible orgs in region — lower = higher score
Funder Liquidity Signal	5%	990 underspend flag — foundations behind on 5% payout +10

Antigravity Prompt:

"Build a scoring agent in Python that reads all unscored records from grant_matches. For each record, retrieve the full grant details and subscriber profile. Calculate a weighted composite score using these 8 dimensions: (1) mission_alignment * 0.25, (2) budget_fit_score * 0.20, (3) geo_match_score * 0.15, (4) deadline_urgency_score * 0.10, (5) funder_history_score * 0.10, (6) program_type_overlap * 0.10, (7) competitive_density_score * 0.05, (8) liquidity_signal * 0.05. Generate a plain-English rationale string explaining the top 3 score drivers. Write the final_score, score_breakdown JSON, and rationale to the grant_matches table. Flag any match scoring above 85 as high_priority = true."

Agent 4 — 990 Funder Audit Agent

Trigger: Weekly cron — Sundays at 2AM **Function:** Pulls IRS 990 data via ProPublica API → calculates 5% minimum distribution requirement vs. actual giving → flags underspend >\$50K within 120 days of fiscal year end as Hidden Liquidity alert

Antigravity Prompt:

"Build a Python 990 analysis agent. Step 1: For each foundation in the tracked_funders table, call the ProPublica Nonprofit Explorer API endpoint /api/v2/organizations/{ein}/filings and retrieve the most recent fiscal year 990 data. Step 2: Extract: total_assets, total_distributions, fiscal_year_end. Step 3: Calculate required_distribution = total_assets * 0.05. Calculate underspend_gap = required_distribution - total_distributions. Step 4: If underspend_gap > 50000 AND

fiscal_year_end is within 120 days, flag as hidden_liquidity = true and write a liquidity_alert record with funder_name, gap_amount, days_remaining, and recommended_action text. Step 5: Email alert digest to internal admin for review before publishing. Run weekly on Sunday at 2AM."

Data Inputs — Layer 1

Source	What Is Extracted	Agent Method
IRS 990 Filings (ProPublica API)	Payout history, underspent years, program focus, grantee counts	API call + structured JSON parser
Foundation Websites (10–50 targets)	Active RFPs, deadlines, priority areas, LOI requirements	Browser-in-the-Loop agent
Candid / GrantStation Feeds	New grants posted, deadline changes, funder news	RSS + structured scraper agent
NYC Nonprofit / Regional Feeds	Regional opportunities, capacity-building grants, state-specific funding	Scheduled scraper — daily pull
Subscriber Org Profile (Onboarding)	Mission statement, NTEE code, program types, staff count	One-time intake → stored in Supabase
EDGAR / State Charity Registrations	Foundation registration status, fiscal year end dates, board changes	Periodic API + browser agent
Google News (Sector-Specific)	Funder announcements, new philanthropic initiatives, donor trend signals	Google News RSS filtered by keyword

Website Architecture — 4 Zones

Zone	Access	Tools & Features	Build Tech
Public Homepage	Anyone	Grant stats ticker · Sample Fit Score demo · Newsletter signup	Next.js + Beehiiv embed
Free Tier Zone	Email subscriber	Newsletter archive · Grant Radar sample (weekly top 3, no Fit Scores) · One free Drafting Tip	Beehiiv gated posts

Paid Member Dashboard	Tier 1 & 2 subscribers	Full Mission-Match feed · Fit Score breakdowns · Hidden Liquidity alerts · Funder Profiles · Drafting Kits	React app on Vercel · Supabase backend · Auth via Clerk
Document Vault	Tier 2 + Board Brief buyers	Downloadable Board-Ready Briefs · Custom grant match reports · Sector trend PDFs	Supabase Storage + signed URLs

Dashboard — 4 Key Modules

Module 1 — Grant Match Feed

Primary utility tool. Filtered news feed of matched grants per subscriber.

Each card displays:

- Foundation Name · Grant Title · Award Range · Deadline
- Strategic Fit Score (color-coded: **green** 85+ · **yellow** 70–84 · **orange** 60–69)
- One-sentence AI-generated rationale

Filters: Fit Score threshold · Deadline window (30/60/90 days) · Program type · Award size

Click to expand: Full 8-dimension score breakdown as bar chart

Antigravity Build Prompt:

```
"Build a React component 'GrantFeed' that connects to Supabase table grant_matches filtered by subscriber_id from the authenticated session. Display each match as a card showing: foundation_name, grant_title, award_min, award_max, deadline, final_score. Color-code the score badge: green (#0D7377) for 85+, yellow (#D4A017) for 70-84, orange (#E07B39) for 60-69. On card click, render a side panel showing the full score_breakdown JSON as a labeled bar visualization using Chart.js. Implement filter controls for min_score, deadline_within_days, and program_type. Deploy to Vercel."
```

Module 2 — Hidden Liquidity Alert Panel

Surfaces foundations currently behind on their 5% payout requirement.

Each alert card shows:

- Foundation Name
- Estimated Underspend Gap (\$)
- Fiscal Year End Date
- Days Remaining
- Recommended Action (e.g., *“Submit LOI before March 31”*)

Module 3 — Funder Profile Pages

Auto-populated by Agent 4’s 990 analysis. Each foundation in the tracked database has a profile showing giving history by year, average grant size, primary program areas, geographic focus, board members, and a **Relationship Notes** CRM field (subscriber-editable). Creates genuine lock-in — subscribers build a private intelligence layer they can’t take with them if they cancel.

Module 4 — Drafting Kit Library (*Tier 2 Only*)

Per-grant kits containing:

- Strategic Narrative Framework
- Key Data Points to cite
- Budget Framing Guide
- Draft LOI Opening Paragraph

All auto-generated by Antigravity agents based on org profile + funder 990 analysis.

Operating Cadence

Day	System Task	Agent Action	Subscriber Touch
MON–SUN	Daily Continuous	Mission-Match Engine scans all new grant postings · 990 Agent monitors new fiscal year filings · Grant matches scored in real-time	Dashboard updates live

SUNDAY	Weekly 990 Audit Run	Full audit of all tracked funders' payout ratios · Generates hidden liquidity flags	None (backend only)
TUESDAY	Newsletter Assembly	Antigravity agent pulls top-scored grants from past 7 days · Formats weekly alert digest · Drafts Sector Pulse section	None (assembly day)
WEDNESDAY	Newsletter Review	You review agent output · Add editorial voice · Approve Hidden Liquidity alerts	None (your review day)
THURSDAY	Weekly Newsletter Publish	Delivers to all subscribers via Beehiiv · Dashboard refreshes weekly Hot Grants module	EMAIL DELIVERY + Dashboard update
FRIDAY	LinkedIn Content Drop	One non-gated tip from the week's research posted to LinkedIn · Links to free newsletter signup	Public — growth engine

Monthly Tasks

Task	What Happens	Subscriber Deliverable
Month-End Grant Digest	Agent compiles all grants surfaced this month with Fit Scores · Filters for deadlines approaching in 30 days	Special email to Tier 1+ subscribers with prioritized action list
Funder Landscape Update	Agent refreshes foundation profiles — new 990 filings, board changes, program priority shifts	Dashboard Funder Watch module update + email notification
Drafting Kit Delivery	For Tier 2: agent generates one Drafting Kit per month for the highest-scoring grant	Secure download link in member portal

Quarterly Deliverable (*Tier 2 + Board Brief Purchasers*)

Board-Ready Brief PDF — auto-generated by Antigravity agents. Compiles sector trends, top 10 grant opportunities, funder landscape shifts, and 3 strategic funding recommendations. Formatted for direct board presentation. Delivered first week of each quarter.

Subscription Tiers

Tier	Price	Includes	Target
FREE	\$0/mo	Weekly newsletter · Top 3 national grant alerts (no Fit Scores) · Sector pulse section	Growth / Lead Gen
CORE	\$99/mo	Free + Full personalized grant match feed · Fit Score breakdowns · Hidden Liquidity alerts · Funder Profile pages	Solo EDs / Small orgs
GROWTH	\$299/mo	Core + Monthly Drafting Kit · Priority deadline alerts · Funder relationship notes (CRM) · Quarterly Board-Ready Brief included	Mid-size orgs \$500K+
BOARD BRIEF	\$500 one-time	Single quarterly Board-Ready Brief PDF — available to any subscriber tier as standalone purchase	Any subscriber

Year 1 ARR Target: ~\$715K

Full Tech Stack

Layer	Technology
Frontend	Next.js · React · Tailwind CSS · Vercel
Backend / Database	Supabase (PostgreSQL)
Authentication	Clerk
Newsletter Delivery	Beehiiv
AI Agent Platform	Antigravity (Agent Manager)
Embeddings / ML	sentence-transformers (all-MiniLM-L6-v2)
990 Data	ProPublica Nonprofit Explorer API
Grant Data	Candid · GrantStation RSS · Foundation websites
PDF Generation	Antigravity agents → Supabase Storage (signed URLs)
Payments	Stripe

Charts / Visualization	Chart.js
Scheduling	Cron jobs via Antigravity
Deployment	Vercel (frontend) · Supabase (backend)

12-Week Build Roadmap

Week	Phase	Build Tasks	Milestone
1–2	Foundation	Supabase schema setup · Beehiiv account + Audience config · Domain + hosting setup (Vercel) · Antigravity project initialization · ProPublica API key · Grant database seed (first 100 funders manually curated)	Infrastructure live
3–4	Agent 1 Build	Intake & Profiling Agent in Antigravity · Subscriber onboarding form (Typeform or custom) · Supabase write functions · Profile classification logic · Test with 5 sample org profiles	Onboarding flow live
5–6	Agent 2 Build	Mission-Match Engine · Sentence-transformer embedding setup · Daily cron scheduling · Grant data scrapers for 10 foundation websites · First batch match run	Matching engine operational
7	Agent 3 Build	Strategic Fit Score algorithm · 8-dimension scoring model · Rationale generation prompt · Test scoring against real grant-org pairs · Calibrate weights	Fit Scores generating
8	Agent 4 Build	990 Funder Audit Agent · ProPublica API integration · Underspend calculation logic · Hidden Liquidity alert generation · Weekly cron setup	990 audit running
9	Dashboard Build	React dashboard frontend · Grant Match Feed component · Fit Score detail view · Funder Profile pages · Auth via Clerk · Connect to Supabase backend	Dashboard MVP live
		Beehiiv integration · Newsletter template build ·	

10	Newsletter System	Auto-population of weekly grant alerts from database · Sector Pulse section · Subject line A/B testing setup	First issue ready to send
11	Beta Launch	Invite 20 NYC nonprofit EDs for free beta · Gather feedback on Fit Score quality, dashboard UX, and grant relevance · Refine agent prompts based on real org feedback	Beta cohort onboarded
12	Revenue Launch	Stripe payment integration · Tier 1 (\$99/mo) and Tier 2 (\$299/mo) subscriptions live · Board-Ready Brief one-time purchase (\$500) activated · LinkedIn launch campaign	REVENUE LIVE 🚀

Master Setup Prompt (Enter First in Antigravity)

"I am building a nonprofit grant intelligence platform called Propello. The system has four core agents: (1) Intake & Profiling, (2) Mission-Match Engine, (3) Strategic Fit Score, and (4) 990 Funder Audit. All data is stored in Supabase. The front-end is a React/Next.js dashboard deployed to Vercel. Newsletter delivery is via Beehiiv API. Please create the initial Supabase schema with the following tables: subscriber_profiles, grants_raw, grant_matches, funder_profiles, liquidity_alerts, drafting_kits, board_briefs. For each table, define the fields I described and create the relationships. Generate the SQL migration script and confirm the schema is ready before proceeding to agent builds."

Priority Build Order for Claude Code

The most important thing to build first is not the most complex system — it is the onboarding form and subscriber profile database. Without org profiles, the Mission-Match Engine has nothing to match against. Week 3–4 is your true foundation. Every agent downstream depends on it being built correctly.

Start here in Claude Code:

1.  Initialize Next.js project with Tailwind CSS
2.  Connect Supabase — run SQL migration script above
3.  Set up Clerk authentication

4. ☒ Build subscriber onboarding form (org profile intake)
 5. ☒ Build Agent 1 (Intake & Profiling) in Antigravity
 6. ☒ Confirm subscriber_profiles records writing correctly
 7. ☒ Seed funder database (first 100 foundations manually)
 8. ☒ Build Agent 2 (Mission-Match Engine)
 9. ☒ Build Agent 3 (Strategic Fit Score)
 10. ☒ Build Agent 4 (990 Funder Audit)
 11. ☒ Build React dashboard — Grant Match Feed first
 12. ☒ Build Hidden Liquidity Alert Panel
 13. ☒ Build Funder Profile Pages
 14. ☒ Integrate Beehiiv newsletter system
 15. ☒ Connect Stripe payments
 16. ☒ Launch
-

 Brand Voice Quick Reference

Context	Tone	Example
Homepage headline	Bold + warm	<i>"Your next grant is already out there. We'll find it."</i>
Feature description	Sharp + confident	<i>"The funding intelligence infrastructure serious nonprofits run on."</i>
Alert/urgency	Direct + caring	<i>"This window closes in 54 days. Your dashboard has the full funder profile."</i>
Onboarding	Encouraging	<i>"Tell us about your mission. We'll handle the rest."</i>
Score rationale	Expert + accessible	<i>"Kellogg has awarded 14 grants to Southwest orgs your size. You're in their sweet spot."</i>
Error/empty states	Warm + honest	<i>"No matches yet — your profile is live and scanning. Check back Thursday."</i>
